<b>Description</b>	An externally threaded fastener with unified threads, a cylindrical head with a flat chamfered top surface, knurled cylindrical sides and hexagonal recess, made from alloy steel.
<b>Applications/Advantages</b>	Ideal for precision assembly work with close tolerances and applications needing a well tooled appearance. Supplies greater tensile strength than equivalent sizes of Grade-5 or Grade-8 hex head cap screws while requiring less surface area or counterbore since the fastener is internally wrenched.
<b>Material</b>	Cap screws shall be made from an alloy steel which conforms to the following chemical composition requirements (per product analysis)-- <i>Carbon</i> : 0.31% minimum; <i>Phosphorus</i> : 0.040% maximum; <i>Sulfur</i> : 0.045% maximum. Also, one or more of the following elements shall be present in sufficient quantity to meet the strength requirements listed below: chromium, nickel, molybdenum or vanadium.
<b>Heat Treatment</b>	Cap screws shall be heat treated by oil quenching from above the transformation temperature and then tempered at a temperature not lower than 650°F.
<b>Hardness</b>	0 through 1/2" diameters: Rockwell C39 minimum; 5/8" diameter & larger: Rockwell C37 minimum
<i>Cap screws of a length 3D or greater, where D equals the nominal diameter of the screw, are subject to tensile strength, yield strength, elongation and reduction of area testing.</i>	
<b>Tensile Strength</b>	0 through 1/2" diameters: 180,000 psi. minimum; 5/8" diameter & larger: 170,000 psi. minimum
<b>Yield Strength</b>	0 through 1/2" diameters: 162,000 psi. minimum; 5/8" diameter & larger: 153,000 psi. minimum
<b>Elongation</b>	10% minimum (applies to machined specimens of length at least 4D where D equals the nominal diameter of the screw)
<b>Reduction of Area</b>	33% minimum (applies to machined specimens)
<b>Plating</b>	See Appendix-A for information on the plating of alloy steel socket cap screws.

#### Notes Regarding the Thread Length of Socket Head Cap Screws

•The basic thread lengths ( $L_T$ ) listed directly below the nominal sizes in the table on page 176 represents the nominal length up to which all screws of that diameter shall be fully threaded.

•To determine the threaded portion of the screws with a nominal length greater than  $L_T$ , subtract the minimum design grip length ( $L_G$ ) from the nominal length ( $L$ ).

•For screws over 1 in. in diameter and of nominal lengths longer than  $L_T$ , the maximum grip gaging length ( $L_G$ ) and the minimum body length ( $L_B$ ) of the screws shall be determined as follows:

$$L_G = L - L_T$$

$$L_B = L - L_{TT}$$

Where: L = Nominal length

$L_T$  = Minimum thread length tabulated below

$L_{TT}$  = Maximum total thread length tabulated below

Nominal Size	Min Thread Length ( $L_T$ )	Max Total Thread Length ( $L_{TT}$ )
1-1/4	3.12	5.09
1-1/2	3.75	6.08
